Deadline: RSVP at your earliest convenience please, by September 17 if possible

This is your or your company's opportunity to learn about this rapidly growing alternative fuel and how you can be a part of this wave of change for the United States of America. This domestic, renewable, American fuel can help your fleet save money, help your diesel vehicles last longer, in addition to helping our country become less dependent on foreign sources of petroleum... and petroleum period. This workshop will give you the information you need to begin using biodiesel in your fleet, or begin selling biodiesel from your station or dispensers.

It is important for you to begin learning about biodiesel for a couple of reasons:

- ▶ Since Rudolph Diesel invented his engine, there's been one fuel for it. *Now there are two!* Use this to your advantage to save money on fuel.
- ▶ Biodiesel can help your diesel vehicles' engines last longer, saving you money
- ▶ Fuel economy gains can further save you money
- ▶ 35 biodiesel stations have opened all across Tennessee in the last 3+ years! Fuel suppliers – you can start using biodiesel to your advantage to show your customers that you care for your country, their vehicles and the bottom line, too!

Consider sending one or two people from your company to come and have lunch with us!

In the workshop, there will be presentations on:

- ▶ why using this fuel is important to your country and community
- ▶ what biodiesel is and where it comes from; biodiesel's pros and cons
- ▶ what fleets in the U.S. and in East Tennessee (as example) are using biodiesel blends
- ▶ how easy it is to integrate biodiesel into your current diesel infrastructure
- ▶ hear from current users themselves about their use of biodiesel
